INCOMPATIBILIDADES ENTRE CIRCUITOS DE ESPERA EN ÁREAS TERMINALES
HOLDING PATTERN INCOMPATIBILITIES IN TERMINAL AREAS

CRITERIOS DE COMPATIBILIDAD

- La incompatibilidad se ha considerado hasta FL240 (inclusive)
- En los recuadros se indica el último nivel de vuelo compatible a partir del cual se produce la incompatibilidad.
- Los recuadros en blanco indican que no se produce incompatibilidad hasta el nivel de vuelo considerado.
- Los rumbos en las esperas son de acercamiento.
- NC: No compatibles.

COMPATIBILITY CRITERIA

- Incompatibility has been considered up to FL240 (inclusive).
- The flight level indicated within squares is the last compatible flight level from which incompatibility occurs.
- Squares in blank indicate that incompatibility does not occur up to the flight level considered.
- Headings in holdings are inbound.
- NC: Not compatible.

1.- La espera ubicada en ETROV está limitada superiormente a FL80 debido a los límites horizontales del TMA Sevilla. Además, a niveles superiores a FL80, interferirá con las LED166 y LED169.

2.- La espera ubicada en PISAV definida con el DVOR/DME MLG está limitada superiormente a FL110 debido a los límites horizontales del TMA Sevilla. Además, a niveles superiores a FL110, interferirá con las LED167 y LED169.

3.- La espera ubicada en PISAV definida con el DVOR/DME AGP está limitada superiormente a FL90 debido a los límites horizontales del TMA Sevilla. Además, a niveles superiores a FL90, interferiría con las LED167 y LED169.

No obstante, en esta tabla se ha representado la compatibilidad entre esperas sin tener en cuenta el límite superior de éstas.

1.- The maximum vertical limit of holding pattern over ETROV is FL80 due to Sevilla TMA horizontal limits. In addition, upper limits over FL80 could interfere with LED166 and LED169.

2.- The maximum vertical limit of holding pattern over PISAV defined with DVOR/DME MLG is FL110 due to Sevilla TMA horizontal limits. In addition, upper limits over FL110 could interfere with LED167 and LED169.

3.- The maximum vertical limit of holding pattern on PISAV defined with DVOR/DME AGP is FL90 due to the horizontal limits of Sevilla TMA. In addition, upper limits over FL90 could interfere with LED167 and LED169.

However, the compatibilities between holding patterns shown in this table, do not take into account the upper limit of these ones.
